

ANSHUL KUMAR MEENA

Senior Full-Stack Engineer · React Native & AI Systems · Project Manager

Ajmer, Rajasthan, India | anshulkm17@gmail.com | +91-9429158300 | [linkedin.com/in/itisanshulkumar](https://www.linkedin.com/in/itisanshulkumar) | github.com/iamanshulkumar | [Portfolio](#)

PROFESSIONAL SUMMARY

Senior full-stack engineer and Project Manager with 4+ years architecting production systems across fintech, real estate, and AI-driven mobile applications. Currently leads a 5-engineer core IT team at Yuvmedia Pvt. Ltd while remaining hands-on across React Native, Node.js, and Laravel — promoted four times in three years, from Frontend Developer to Project Manager. Designs multi-service architectures spanning queue-based execution, real-time pub/sub, and broker/API integrations, and has shipped 7+ production mobile applications integrating LLM APIs (Claude, OpenAI) for prediction, analysis, and automation. Ranked in the top 1% globally on TryHackMe; brings a security-first mindset to every system built.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript, TypeScript, Tailwind CSS, Bootstrap
Mobile: React Native, Expo (iOS & Android), Expo Router, Reanimated, Stream Chat, Socket.IO
Backend & APIs: Node.js, Express, Laravel (PHP), REST API Design, Authentication (OAuth, OTP, Sanctum)
Data & Infrastructure: MySQL, MongoDB, Redis, BullMQ, Firebase
AI / LLM Engineering: Claude API, OpenAI API, Prompt Engineering, RAG, LLM-based Prediction Systems
Architecture & Leadership: System Design, Queue-Based & Real-Time Architecture, Technical Leadership, Mentoring
Security: Web Application Security, VAPT, Penetration Testing
Other: WordPress/WooCommerce, Shopify, Wix, SEO, PPC, Analytics Dashboards

PROFESSIONAL EXPERIENCE

Yuvmedia Pvt. Ltd	Ajmer, Rajasthan
Project Manager & Android App Developer	Apr 2026 – Present
<i>Promoted four times in three years (Frontend → Full-Stack → Android → Project Manager). Previously Full-Stack Developer (Mar 2024 – Jan 2025) and Frontend Developer (Jan 2023 – Mar 2024).</i>	
● Lead a 5-engineer core IT team spanning mobile, backend, and QA — owning sprint planning, architecture reviews, and delivery across 60+ concurrent client projects — while remaining hands-on as Android/React Native developer. ● Architected and delivered 7+ production mobile applications (React Native with Laravel, Node.js, and MySQL backends) across fintech, real estate, automotive marketplace, and fantasy sports domains. ● Designed and shipped an AI-powered stock analysis tool, integrating LLM APIs (Claude/OpenAI) with RAG-based retrieval over market data to generate investment insights for Indian retail investors. ● Built Victory Vision, an AI fantasy-cricket app pairing prompt-engineered prediction logic with a Node.js/MySQL REST API to power automated team generation and screenshot-based performance analysis. ● Reduced dependency on external contractors by delivering full-stack builds in-house, cutting third-party development costs. ● Hardened production infrastructure by identifying and remediating critical server-side security vulnerabilities, including removal of active backdoors and re-validation of exposed endpoints. ● Improved real-time responsiveness across mobile applications by optimizing Socket.IO connections, client-side state management, and API call efficiency. ● Mentor engineers on implementation approach, code review standards, and architectural best practices.	
ASF Digitals	Anand, Gujarat
Web Developer	Dec 2021 – Jan 2023
● Built responsive, production-grade interfaces in React.js across e-commerce, fitness, and industrial-supply client projects. ● Delivered ASF Nutrition, a WooCommerce storefront with an integrated UPI payment gateway, and a React.js workout-recommendation app for Fitness Club. ● Implemented SEO improvements that measurably increased organic visibility for client websites.	

SELECTED ENGINEERING PROJECTS

AI Stock Analyser	View case study →
<i>AI-powered algorithmic trading platform with live execution, strategy backtesting, copy trading, and broker integration.</i>	
Tech: React Native (Expo) · Node.js/Express · MongoDB · Redis · BullMQ · Socket.IO · MetaAPI · Claude AI	

- Decoupled strategy execution from the API layer using BullMQ workers with retries and exponential backoff, stabilizing response times and eliminating job loss during worker failures.
- Replaced polling-based position sync with Socket.IO + Redis pub/sub, cutting redundant database reads while delivering real-time updates to all connected clients.
- Added a Redis caching layer in front of Claude-based analysis calls to reduce repeat LLM API costs, and built the MetaAPI broker bridge with a reconnect-handling lifecycle manager.

Wealth Walk

[View case study →](#)

Fintech app delivering trading signals, forex data, screeners, and broker integration to retail investors.

Tech: React Native · Node.js · MySQL · Redis · Socket.IO · Firebase

- Built a broker-abstraction layer (adapter pattern) so new broker integrations plug into a common interface (connect / getPositions / placeOrder) instead of one-off implementations.
- Delivered real-time portfolio and market-data streaming via Socket.IO/Redis pub-sub, feeding live trading signals and screeners.
- Implemented encrypted credential storage and TLS transport to protect financial data end-to-end.

Victory Vision

[View case study →](#)

AI-powered fantasy cricket app with automated team generation, screenshot analysis, and match predictions.

Tech: React Native (Expo Router) · Node.js · MySQL · LLM APIs · Prompt Engineering

- Built an AI team-generation engine producing paired safe/risky lineups from prompt-engineered prediction logic, backed by a 15+ endpoint REST API.
- Designed a screenshot-upload analysis pipeline (multipart upload → async processing → structured results) for fantasy-score feedback.
- Built a 20+ component reusable design system and a custom spring-physics animated navigation bar.

Land Squire

[View case study →](#)

Real estate marketplace connecting property buyers, brokers, and bank agents with map-based discovery and CRM.

Tech: React Native (Expo) · Laravel · MySQL · Google Maps · i18next

- Built a map-discovery system with a custom hook managing viewport culling and marker rendering, keeping hundreds of property markers smooth while panning.
- Delivered role-based flows for 3 user types (buyers, brokers, bank agents) across 25+ screens on a single Laravel REST API (35+ endpoints).
- Implemented bilingual English/Hindi localization with dual font-loading and 130+ translation keys.

Carz Choice

[View case study →](#)

Used-car marketplace connecting buyers and dealers with real-time chat, financing, and a sell wizard.

Tech: React Native (Expo) · Laravel · MySQL · Stream Chat · Formik/Yup

- Integrated Stream Chat with deterministic channel IDs and server-generated tokens, pairing each chat with an atomically created backend lead.
- Built cascading dependent-dropdown filtering (brand → model → variant, city → state → pincode) across multiple forms with guarded effects to prevent race conditions.
- Delivered a financing flow integrating 6 partner banks with EMI calculation, plus a dealer-registration and CRM dashboard.

EDUCATION & CERTIFICATIONS

B.Tech, Computer Science & Engineering — Rajasthan Technical University, Kota

2020

CGPA: 7.25

- Ethical Hacking Essentials (EHE) — CodeRed, EC-Council (Sep 2022)
- Introduction to IT & Cybersecurity — Cybrary (Jun 2022)
- Advent of Cyber 4 — TryHackMe (Dec 2022)
- Pen Testing Course, High Distinction — Charles Sturt University

ACHIEVEMENTS

- Ranked in the top 1% globally on the TryHackMe CTF platform.
- Ranked 41st out of 2,200 participants in Get Set Hack, a RISE Cybersecurity Hackathon.
- Promoted four times within three years at Yuvmedia (Frontend → Full-Stack → Android → Project Manager).
